

CHP, Gen-Set & Engines

Product & Service Brochure

Fleetsolve® 

An Introduction

Celebrating 20+ years of business growth in the power generation and renewable energy sector, Fleetsolve is a multiple award-winning business, **delivering business resilience, supporting the energy transition and helping to deliver onsite industrial decarbonisation** across the UK & Ireland.

We **work across all major industry sectors**, in multiple power critical environments, with customers including Service Providers, Facilities Management Companies, NHS Hospitals, Council Authorities, Food Retail Chains, Industrial Manufacturing Sites, Tier One Utility Companies, Residential Property Schemes, Commercial Offices, Russel Group Universities and Energy Consultants.

Delivering Maximum Uptime

Fully accredited by all the major schemes and professional bodies, we specialise in the design, manufacture and operation of a wide range of liquid and gaseous-powered combined heat and power (CHP) units and power generation systems, specifically designed for operational resilience, black start and dynamic heat & power demand.

We are totally committed to **delivering a first-class customer service**. Key to this has been the formation of exclusive, strategic OEM relationships with world-leading CHP brands to deliver our “energy as a service” proposition.

In securing these partnerships, Fleetsolve supports all industry sectors with all fuel types and all sizes of power generation and CHP, ranging from 2kW to 2MW and multiples thereof.

Keeping Business Moving:

At a time when energy resilience and business-continuity are a conversation in every kind of organisation, our OEM agreements with leading manufacturers are designed to give much-needed market confidence. If your business is concerned by the impact of Brexit on parts supply and import challenges, our OEM partnerships will offer assurance.

We provide extensive support to our customers with our own inventory of **stocked parts, factory-trained technicians, UK and Ireland based warranty management, specialist service and maintenance support**. We have invested significantly in OEM training and tooling to provide the best service from our UK and Ireland wide, locally deployed, engineering team.

Future-Proofing Your Energy Assets:

If your organisation is planning to make the transition to alternative, sustainable fuel sources, you will be pleased to know our OEM partner systems operate on blended fuel-mixes, biogases, Bio LPG, LPG, Propane, bio-liquids as well as RDME and Syn-Gases. For customers aiming to move to high-blend – and ultimately to 100% Hydrogen – **you can be assured that our CHP's are fully future-proofed**.

UK&I Distributor

UK&I Solution Partner

UK&I Strategic Partner

Parts Support

- Fully Warranted, official OEM Parts
- UK-Stocked Inventory
- 1000's of parts in-stock
- Full CHP, Gen-Set & Engine Range
- MAN, Siemens Energy, Guascor Energy, RMB, Yanmar, Jenbacher, MWM, Perkins, CUMMINS, Scania & CAT - all available and supplied
- Auxiliary Equipment & Consumables
- Next Day Delivery Available
- Dedicated Parts Team

Service & Maintenance

- UK&I Wide Engineer Network
- OEM Factory Trained Engineers
- Gas Safe Technicians
- Scheduled Servicing Contracts
- Reactive/Emergency Breakdown Response
- 24/7 Tech Support
- Remote Engine & System Monitoring

Engine Supply & Refurbishment

- New Engine Supply
- Full Overhaul & Refurbishment Service
- Cylinder Head & Turbo Refurbs
- Extensive Fuel Types & Blends
- Natural Gas, Biogases, Bio-LPG, LPG, Propane, Bio-Liquids, RDME & SynGases
- Power Output Range, 2Kwe - 2MW
- Hot-Swap & Swing Set Service
