Building Intelligence

Styles&Wood Group PLC provide a fully integrated range of property and project delivery services in the UK and overseas.

Operating nationally from our head office in Altrincham with regional offices in London, Nottingham and Lancaster, our reach also extends to the Republic of Ireland, Isle of Man, Channel Islands and via our Dutco Styles&Wood joint venture, the United Arab Emirates.

iSiteGo[®]

Introduction

iSiteGo is a framework that allows the creation of customisable data capture solutions for tablets and smart phones without the need for expensive, bespoke application development.

iSite can create or replicate forms-based processes for mobile data collation using the iSiteGo application builder toolkit.

Captured data is stored on a dedicated server for access through a connected network. This data can be integrated into multiple back office systems for data management, analysis and reporting.

Operational on iOS through the Apple App Store and Android from Google Play, just one installation via a redemption code provides multiple solutions and functionality within the single application.

The flexible mobile app solution

Features

- iSiteGo is built with powerful security and permissions settings, ensuring only relevant users are able to access data.
- Data can be collected offline and can be submitted when a network connection is available.
- Highly cost effective with a user license able to access all build applications.
- The interface is responsive to any device or screen size on iOS and Android.
- Signature capture input directly on the device, allows forms to be signed off.
- Image capture through the device camera can be annotated.
- Co-ordinates can be captured using the device's GPS functionality.

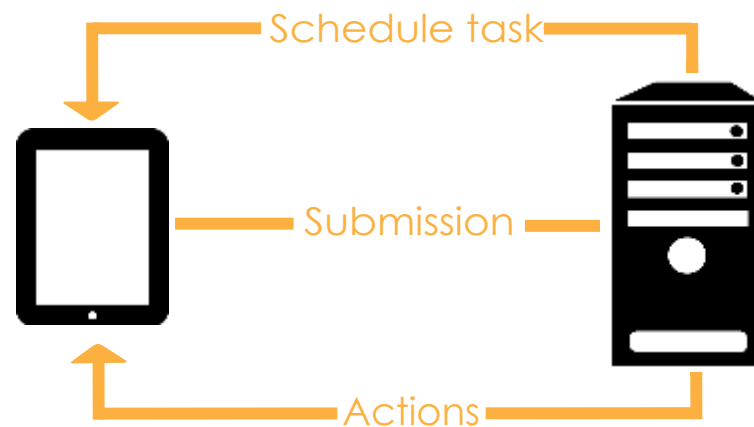

Operation

- iSiteGo is visually simple with an intuitive workflow that enables productive use with minimal training or technical knowledge.
- Forms can be set with mandatory field data capture to validate completion.
- Quick multiple surveys and assessments can be completed using the repeatable section options.
- To ensure sections are completed correctly, minimum or maximum repeats can be specified.
- Previously completed forms can be accessed to monitor work progress.
- Conditional and dynamic fields allow users to follow a workflow based on the previous field submission.

Applications are split into Sections and Controls:

- A section can be standard, repeatable, conditional, repeatable conditional or a summary.
- Controls include date, time, multiple select, multiple choice, text, numeric, signature, picture, document, location, table view and slider.
- Each control option has properties that can be customised depending on the application of the solution.

Benefits

Flexible, custom forms can be created without timely and expensive coding development.

iSiteGo is native to the device. Data can be captured on site without a network connection.

Captured data can be accessed through a network without connecting to a back office system.

iSiteGo is simple to implement and utilise, efficient in its multipurpose use and delivers effective functionality.

Examples of uses in corporate real estate and facilities management include:

- Snagging
- Security inspections
- Compliance recording
- Workspace audits
- Property inspections
- Site surveys
- Risk assessments
- Health and Safety audits
- Cleaning inspections
- Asset audits

Real world solutions

Options

iSiteGo can be customised to represent marketing and brand guidelines, including logo and colour.

The iSiteGo flexible licensing model is available by user or login, depending on specified requirements.

iSiteGo connects seamlessly to iSite's Portal or HUB solutions for data management, analysis and reporting.

Alternately, iSiteGo can be connected to existing systems.
